Subject: Nagog Pond drinking water access by surrounding communities

Is it at all possible to make our granting of a water plant construction permit to Concord contingent upon Concord in turn granting Acton (and Littleton?) a form of 'right of first refusal' whereby we would be entitled to buy, should a dire need arise, quantities of treated water from Concord at the price of Concord's own cost?
Some further definitions might serve to put certain brackets around such a reciprocal grant, if necessary. But in theory, is such a thing feasible under current laws and regulations?
I have checked with friends about the reasonableness of a deal like that, and they think it's a good idea. Maybe you could address this question at least briefly during tonight's hearing.
