II. on the section:

1. need

c. sight distances

my question is do we determine sight distance using our best judgement or an actual numerical value?

III. on the section:

1. need

e. population

3. schools

you questioned what is distance requirement for walking to school.

in a memo from the school transportation dept. i read that there is no mandatory walking distance.

if the distance to school is less than a mile, the student may walk but can also have winter pick up. but the transportation dept. will not allow a student to walk to school if they have to cross a major road without a crossing guard or if there is no sidewalk.

IV. on the section:

1. need

e. population

my question is should items 1-3 all have equal point values? because having sidewalks within a 1 mile radius of all school campuses was the #1 criteria in the TAC 1987 master plan report.
