Re: Caouette Property - Soil and Sediment Sampling Program
Stow and Maple Streets
Acton, Massachusetts

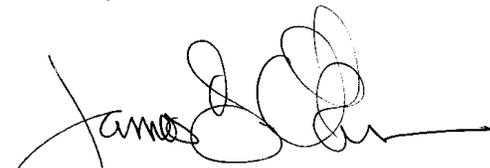

Dear Mr. Bartl:

Attached is our updated report describing soil and sediment sampling and analysis performed at the above referenced property. This report includes the information from our September 29, 2010 report and the results of additional sampling conducted on October 4, 2010. The last section of this report includes a preliminary engineer's estimate of probable remediation costs.

As described in our September 29, 2010 report, we identified two areas of greater than 40 mg/kg arsenic in surface soils (0-1 foot depth) that may represent imminent hazard conditions as defined in the Massachusetts Contingency Plan. As a result of the October 4, 2010 sampling, an additional area of soil with arsenic greater than 40 mg/kg was identified. DEP has been notified of these conditions and the three areas are now fenced.

Should you have any questions regarding the report, please do not hesitate to call.

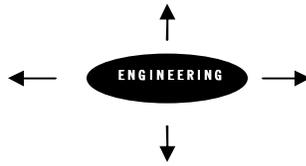

Very truly yours,
O'Reilly, Talbot & Okun Associates, Inc.

1.0 INTRODUCTION

This report presents the results of additional soil and sediment sampling performed at the Caouette Property located off Stow and Maple Streets, adjacent to the former MBTA property in West Acton.

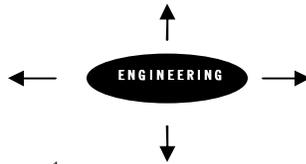

Following the issuance of our September 29, 2010 report, the Town of Acton requested O'Reilly, Talbot & Okun Associates, Inc. (OTO) to undertake additional soil sampling and analysis to better define an area of shallow soil contamination at the property. This report has been updated to include the information from this additional testing.

2.0 BACKGROUND

In March, 2010 O'Reilly, Talbot & Okun Associates, Inc. (OTO) completed a Phase I Environmental Site Assessment of two adjoining parcels located at 2 Stow Street and 90 Martin Street (Figure 1 – Site Locus). Our report found that an area along the northeastern portion of the Site had been used for industrial purposes by the “Morocco Factory” in the late 1800’s and early 1900’s. Historic maps were used to place the approximate building outlines on our Site Plan, which coincided with foundations at the Site. The Morocco Factory produced what were described as high grade soft leathers starting in approximately 1892. Our review indicated that “Morocco leather” was typically red, and could have been tanned through the use of either vegetable products or chromium. Following the Morocco Factory, the facility was occupied by an ice cream pail manufacturer. The Moore & Burgess Company (a fabric strip manufacturer) occupied the facility from 1908 through 1917. The buildings remained vacant until around 1930, when they were demolished. A former locomotive house and turntable (or roundhouse) building were located off-site, adjacent to the factory buildings in what we understand to be a former MBTA property now owned by the Town of Acton. The former historical industrial uses of the northeastern portion of the Site from 1892 through 1917 were identified as a Recognized Environmental Condition (REC) as that term is defined in the ASTM Environmental Site Assessment Standard. OTO recommended that to further evaluate possible impacts to Site soil and/or groundwater associated with this REC, a subsurface exploration program with testing of soil and groundwater should be performed in the vicinity of the former buildings.

In April and May, 2010, Groundwater & Environmental Services, Inc. (GES) of Westford, Massachusetts completed a Phase II Environmental Site Assessment of the property, which included a subsurface investigation program focusing on the former Morocco Factory area. The Phase II report was submitted to the town on June 7, 2010. The Phase II report described the following investigations:

1. Installation of four groundwater monitoring wells with collection of eight soil samples for analysis;
2. Collection of seven shallow soil samples for analysis;

3. Collection of six sediment¹ samples for analysis from four locations; and
4. Collection of four groundwater samples from the four groundwater monitoring wells for analysis.

The soil and sediment samples were analyzed for polycyclic aromatic hydrocarbons (PAHs) and the metals arsenic, chromium, lead and zinc. Groundwater from the four monitoring wells was analyzed for Volatile Organic Compounds (VOCs) and the dissolved metals arsenic, chromium, lead and zinc. The results of the soil and sediment sampling are summarized in Tables 1 and 2. As shown in Table 1, a number of PAHs and the metals arsenic, total chromium² and lead were detected in the shallow soil samples at concentrations greater than applicable RCS-1 reportable concentrations. The elevated PAHs were detected within the footprint of the former Site building. The elevated metals were within the former building foundation and in the vicinity of what is shown as a former coal pile on the historic maps.

As shown in Table 2, chromium was detected above the RCS-1 reporting standard in sediment, and above Massachusetts Department of Environmental Protection (DEP) freshwater sediment screening criteria for chromium and lead. One PAH was detected above the sediment screening criteria in one sediment sample (SD-4), although the detection limits for the PAH analyses were above a number of the criteria (see Table 2). Note that exceedances of sediment screening criteria do not by themselves trigger an obligation to notify DEP, although they do need to be addressed before a permanent solution can be achieved.

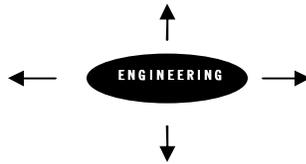

VOCs and metals were not detected in the four groundwater samples at concentrations above the applicable RCGW-2 reporting standard. Only the VOC naphthalene and the metal zinc were detected (in one and two groundwater samples respectively) at concentrations less than the RCGW-2 standard. Based on relative groundwater elevations, the groundwater flow direction at the Site was inferred to be towards the southeast and Mill Pond.

3.0 OTO SUBSURFACE INVESTIGATION PROGRAM

During the OTO's initial visit to the Site to select sample locations, it appeared that some of the sample locations used by GES were not located properly on their Site Plan. These monitoring well, sediment and soil sample locations were re-mapped onto OTO's Site Plan by our field use of tape measurements and are shown in Figure 2. It now appears that GES monitoring well MW-4 is located on property formerly owned by the MBTA and now owned by the Town; the Acton Engineering Department confirmed this finding. After confirming the location of MW-4 on Town-owned property, the Town notified DEP of the reportable condition identified by

¹ GES described samples collected adjacent to the Mill Pond (SD-1 through SD-4 locations) as "sediment". While this is a fine point of environmental science, soil at these locations is probably more accurately described as "wetland soil". In this report we continued use of the word "sediment" to describe this material for consistency.

² Per the Massachusetts Contingency Plan, total chromium is assumed to all be in the more toxic hexavalent form unless testing is done to prove otherwise. OTO's retest of these areas detected no hexavalent chromium, so the higher reporting standard (1,000 mg/kg) applies.

GES in the shallow soil sample from MW-4; and DEP has assigned Release Tracking Number (RTN) 2-17998 to that reported release.

Based on the results of the Phase II GES investigations the following soil sampling and analyses was performed by OTO:

1. Collection of additional shallow soil samples around the previously detected PAH detections to advance the evaluation of PAHs within the shallow soils at the Site;
2. Analysis of one soil sample with previously detected elevated PAHs for Extractable Petroleum Hydrocarbons (EPH);
3. Analysis of two soil samples from the area with PAHs by Scanning Electron Microscopy (SEM) to evaluate the possible presence of coal or wood ash;
4. Collection of a soil sample from 4 to 5 feet below grade at the MW-1 location for hexavalent chromium analysis;
5. Collection and analysis of shallow soil samples for lead and arsenic around previously detected lead and arsenic detections to help evaluate the extent of these metals in shallow soils;

And the following additional explorations and analyses were performed by OTO for sediment.

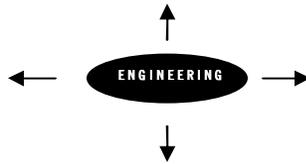

6. Sediment location SD-4 (0 to 2 feet below grade) was resampled and analyzed for PAHs, with lower detection limits to evaluate whether PAHs exceeded freshwater sediment screening criteria;
7. Shallow sediment locations SD-1, SD-3 and SD-4 were retested for hexavalent chromium; and
8. Shallow sediment location SD-4 and areas around it were retested for lead.

Soil and sediment samples were collected by OTO on September 1 and 2, 2010; samples were submitted to Alpha Laboratories (Alpha) of Westborough, Massachusetts. The soil sample for SEM analysis was submitted to SEMTech Solutions of North Billerica, Massachusetts. The Alpha laboratory reports and SEMTech laboratory report are attached in Appendices A and B respectively. The results of the Alpha analyses are summarized in Tables 3, 4 and 5.

As described in the following section, OTO's soil testing identified shallow soil locations with concentrations of arsenic, lead and PAHs greater than the MCP RCS-1 criteria. To better define these areas of elevated arsenic and lead concentrations, OTO was requested to collect an additional 20 shallow (0-1 foot) soil samples. To assess whether soil removed from the Site as part of remediation would be considered a hazardous waste, OTO analyzed three soil samples by the Toxicity Characteristic Leaching Procedure (TCLP) for lead and arsenic.

4.0 RESULTS OF ANALYSES

The following discussion presents the results of chemical analysis and preliminary delineations of the extent of contaminated soils. Possible sources of the detected contamination include

previous activities on the property (e.g. activities associated with the former Morocco Factory, other successor uses of the property, or the use of agricultural chemicals on the property) and/or (for certain constituents) previous activities associated with the historical uses of the adjacent railroad property near its property line with the subject property. Delineations of the extent of contamination are preliminary and confirmation of the extent is required to serve as a basis for final planning.

4.1 INITIAL SOIL TESTING

The goal of our initial sampling and analysis program was to better define areas of soil contamination identified by GES. Our results indicated the following:

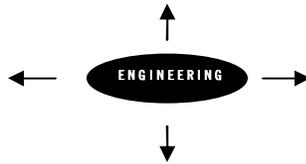

1. PAHs are present at concentrations above the MCP S-1, GW-2 and GW-3 Method 1 standards in shallow soils (approximately 0 to 2 feet below grade) within and near the footprint of the former Morocco Factory building. This is illustrated on Figure 5, which shows color coded soil sample locations (in green) where laboratory results indicate concentrations of PAHs above method 1 standards. These data are summarized on Table 3. Review of lead analyses (Tables 1 and 4) indicate elevated lead is co-located with the elevated PAHs;
2. Arsenic is present at concentrations above the S-1, GW-2 and GW-3 Method 1 standards in shallow soils at the east end of the area of exploration (MW-3) and in the vicinity of what was identified as the former “coal pile” on historic maps (Table 4). This is illustrated on Figure 4, which shows color coded soil sample locations (in red) where laboratory results indicate concentrations of arsenic above the Method 1 standard of 20 mg/kg;
3. Testing did not identify hexavalent chromium in Site soils (Table 4); as a result, we have concluded that chromium is not a Contaminant of Concern for Site soils.

Our review of the SEMTech report indicates that while coal ash, wood ash and coal were all present in the two tested soil samples, coal tar was also present. The presence of coal tar means that in our opinion the notification exemption for coal ash, wood ash and coal should not be used at the Site.

Based on the results of this testing, we identified two areas that were fenced as Immediate Response Actions to limit access to arsenic containing soil following DEP notification. As discussed below, a third area with elevated arsenic concentrations was identified from the October 4, 2010 sampling and this area is also now fenced.

4.2 SUBSEQUENT SOIL SAMPLING TO ASSESS EXTENT OF IMPACT

Following the receipt of the results described in Section 4.1, the Town requested OTO to conduct additional sampling and analysis to better define the extent of the contaminated shallow soils. This subsequent phase of soil testing took place on October 4, 2010. The 20 additional soil samples were designated as SS-11 through SS-30. The locations and test results for these

samples are shown on Figure 2.1, the laboratory report is included in Appendix C, and the results are summarized in Table 6.

At the location of the former small out-building at sample SS-25, arsenic was detected at 200 mg/kg, which exceeds the imminent hazard criteria. After OTO reported the results of this testing, the third area of elevated arsenic in shallow soils was fenced as well³.

The samples collected from the farm field area (represented by samples SS-11 through SS-23) did not have concentrations greater than the RCS-1 criteria. Two other areas with elevated concentrations of arsenic and/or lead were identified. The first of these was within the arms of the former small "L" shaped building (sample SS-30) and the other was within the foundation perimeter of the largest of the former buildings (samples SS-27 and SS-28).

4.3 TCLP TESTING OF IMPACTED SOIL

To evaluate if the arsenic or lead in Site soil would cause the soil to be characteristically hazardous pursuant to the Massachusetts Hazardous Waste Regulations (310 CMR 30.000), we requested our contract laboratories to prepare and analyze three composite samples of soil for TCLP testing. Each of the individual samples included in the composite contained lead and/or arsenic at a concentration equal to or greater than 100 mg/kg. Note that Alpha Analytical Laboratories analyzed two of these samples (report in Appendix A) and Contest Analytical Laboratories analyzed one of the samples (report in Appendix C).

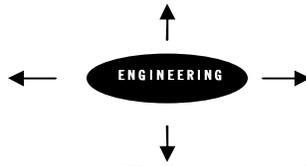

The results of the TCLP testing are summarized on Table 7. The three samples did not contain concentrations of extractable arsenic or lead high enough for the soil to be classified as a characteristically hazardous waste. Therefore when generated the waste from this area would not be considered hazardous.

4.4 SEDIMENT

To conduct a preliminary evaluation of possible impacts to sediment, we compared the concentrations detected to DEP's Freshwater Sediment Screening Criteria and to the MCP S-1 soil criteria; a summary of this comparison is shown on Tables 2 and 5. The following summarize our conclusions from this comparison.

1. A single PAH constituent (fluorene) was detected in one sediment sample (SD-4) at a concentration above Freshwater Sediment Screening Criteria (Table 2), but well below the MCP S-1 standards. This location is the one closest sediment sample to the railroad tracks and past rail road operations may have impacted sediment in this area.
2. Hexavalent chromium was not detected in Site sediment (Table 5). In our opinion chromium is not a Contaminant of Concern for Site sediment;

³ Initially, blaze orange construction/snow fencing was installed with steel stakes. At DEP's request, this fencing is being upgraded to five foot temporary steel fencing.

3. Retesting of sediment location SD-4 did not identify lead concentrations above Method 1 S-1 standards or the sediment screening criteria (Table 5). In our opinion lead is not a Contaminant of Concern for Site sediment.
4. At this time we do not foresee the need for remediation in the pond, although additional ecological risk characterization will need to be part of the MCP Site closure process.

4.5 PRELIMINARY ESTIMATES OF PROBABLE REMEDIATION COSTS

The cost estimates presented in this section should be considered preliminary; additional information will be needed to refine them. Our preliminary estimates of impacted soil volumes are based on limited testing on the Stow/Maple Street property; although these concentrations may well extend onto the former MBTA/future rail trail property. The estimates of probable remediation cost were developed based on the assumption that concentrations of contaminants at the property will be reduced by removal of contaminated soil such that a permanent solution may be achieved without the application of an Activity and Use Limitation⁴. While there may be less expensive options (such as keeping the impacted soil on the Site under a protective soil layer and imposing an Activity and Use Limitation of the affected areas), we have prepared these preliminary estimates as likely upper-bound estimates of probable remediation cost.

The area of the former Morocco Factory known to be impacted with PAHs and lead is approximately 3,400 square feet (40 by 85 feet - Figure 3). An assumed two foot thickness of impacted soil yields a volume of 250 cubic yards. At 1.5 tons per cubic yard approximately 380 tons of PAH impacted soils would be generated through its excavation.

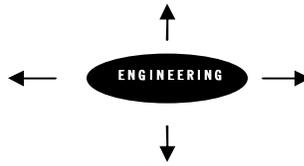

The three areas of the Site known from the initial testing to be impacted with arsenic total approximately 2,500 square feet. A presumed two foot thickness of contaminated soil yields a volume of 185 cubic yards. At 1.5 tons per cubic yard approximately 280 tons of arsenic impacted soils would be generated through remediation.

We contacted ESMI of Loudon, New Hampshire regarding the potential disposal of this contaminated soil at their facility. Since our subsequent test results indicate the soil is not a characteristically hazardous waste⁵, it is our opinion that it should meet their acceptance criteria. Trucking to and disposal at this facility is expected to cost about \$50 per ton.

In addition to the transportation and disposal fee, you should assume an additional approximately \$50 per ton for Site preparation, excavation and restoration, so that a cost of \$100 per ton for the total 660 tons (\$66,000) is our preliminary estimate for the excavation and off-site disposal the impacted soil.

⁴ An Activity and Use Limitation (or AUL) is a notice registered on the deed for the property which includes specific descriptions of activities that are permitted and activities that are not permitted on the property. AULs are also referred to as institutional controls.

⁵ See Table 7 for a summary of the results of TCLP testing to assess if the Site soil is characteristically hazardous.

Based on the results of the subsequent soil testing (described in Section 4.2 of this report), three additional areas were identified where shallow soil contains elevated concentrations of arsenic and/or lead. Based on field observations and the test results from adjacent areas, we are assuming that each of these locations of elevated concentrations has an area of 10 yards by 10 yards and is 2.0 feet deep. This would result in an additional 200 cubic yards (or 300 tons) of additional soil to be removed from the Site. At a unit removal cost of \$100/ton, this would increase the remediation cost by \$30,000.

In addition to contractor remediation probable costs, an additional approximately \$35,000 would be needed to cover confirmation testing, report preparation and other LSP related costs. These estimated costs are summarized in Table 8.

5.0 LIMITATIONS

Our report has been performed subject to the following limitations:

1. The observations presented in this report were made under the conditions described herein. The conclusions presented are based solely upon the services described, and not on scientific tasks or procedures beyond the scope of the project. The work described in this report was carried out in accordance with the contract Terms and Conditions.
2. In preparing the report O'Reilly, Talbot, Okun & Associates, Inc. relied on certain information provided by federal, state and local officials and other parties referenced herein, and on information contained in the files of state or local regulatory agencies at the time of the file review. Although there may have been some degree of overlap in the information provided by these sources, O'Reilly, Talbot, Okun & Associates, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this assessment.
3. Observations were made of the Site and of the structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, we render no opinion as to the presence of hazardous materials or oil, or to the presence of indirect information relating to hazardous materials or oil in that portion of the Site. In addition, we render no opinion as to the presence of hazardous materials or oil, where direct observations of portions of the Site were obstructed by objects or coverings on or over these surfaces.
4. The purpose of this Report was to assess the physical characteristics of the Site with respect to the presence of hazardous material or oil in soil or groundwater at the Site. No specific attempt was made to check on the compliance of present or past owners or operators of the Site with federal, state, or local laws and regulations, environmental or otherwise.
5. Cost estimates were developed for material costs which were deemed to be potentially applicable at the Site. These estimates are preliminary. They are based upon published information and/or our experience at other sites. Actual costs may vary.

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	NO
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	YES
E b	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES
A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	NO
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	NO
For any questions answered "No", please refer to the case narrative section on the following page(s).		

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: STOW ST
Project Number: 0022-23-02

Lab Number: L1013542
Report Date: 09/10/10

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

Report Submission

At the client's request, sample "MW-4 (0-2)" was placed on hold.

Sample Receipt

In reference to question A:

The analysis of Hexavalent Chromium was not performed from a separate container that remained unopened until the alkaline digestion commenced.

In reference to question H:

Matrix Spikes were not submitted for the analyses of Metals and Hexavalent Chromium.

Project Name: STOW ST
Project Number: 0022-23-02

Lab Number: L1013542
Report Date: 09/10/10

Case Narrative (continued)

EPH

L1013542-02 has elevated detection limits due to the dilution required by the matrix interferences encountered during the concentration of the sample and the analytical dilution required by the elevated concentrations of target compounds in the sample.

L1013542-02 was re-analyzed on dilution in order to quantitate the sample within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial analysis. The re-analysis was performed only for the compound that exceeded the calibration range.

In reference to question G:

One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The surrogate recovery for L1013542-02 is outside the acceptance criteria for o-Terphenyl (307%); however, the sample was not re-extracted due to coelution with obvious interferences. A copy of the chromatogram is included as an attachment to this report. The results are not considered to be biased.

Metals

In reference to question I:

All samples were analyzed for a subset of MCP elements per the Chain of Custody.

GLOSSARY

Acronyms

- EPA** - Environmental Protection Agency.
- LCS** - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
- LCSD** - Laboratory Control Sample Duplicate: Refer to LCS.
- MDL** - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- MS** - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
- MSD** - Matrix Spike Sample Duplicate: Refer to MS.
- NA** - Not Applicable.
- NC** - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
- NI** - Not Ignitable.
- RL** - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- RPD** - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.

Data Qualifiers

- RE** - Analytical results are from sample re-extraction.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised July 19, 2010 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	NO
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES
A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	NO
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	NO
For any questions answered "No", please refer to the case narrative section on the following page(s).		

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: STOW ST
Project Number: 0022-23-02

Lab Number: L1013543
Report Date: 09/10/10

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEX data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

MCP Related Narratives

Report Submission

The results of the Total Organic Carbon analysis will be issued under separate cover.

At the client's request, sample L1013543-10 was placed on hold.

Sample Receipt

In reference to question A:

The analysis of Hexavalent Chromium was not performed from a separate container that remained unopened until the alkaline digestion commenced.

In reference to question H:

Matrix Spikes were not submitted for the analyses of Metals and Hexavalent Chromium.

Project Name: STOW ST

Case Narrative (continued)

Semivolatile Organics - SIM

L1013543-07 has elevated detection limits due to the dilution required by the sample matrix.

In reference to question G:

One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question I:

All samples were analyzed for a subset of MCP compounds per the Chain of Custody.

Metals

LCS/LCSD SRM Lot# ERA D067-540

In reference to question I:

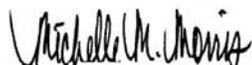

All samples were analyzed for a subset of MCP elements per the Chain of Custody.

Chromium, Hexavalent

LCS/LCSD SRM Lot#: ERA D062-921

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. GLOSSARY

Acronyms

EPA	-Environmental Protection Agency.
LCS	-Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	-Laboratory Control Sample Duplicate: Refer to LCS.
MDL	-Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	-Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	-Matrix Spike Sample Duplicate: Refer to MS.
NA	-Not Applicable.
NC	-Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	-Not Ignitable.
RL	-Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	-Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	-Spectra identified as "Aldol Condensation Product".
B	-The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank.
D	-Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	-Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
H	-The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
I	-The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
P	-The RPD between the results for the two columns exceeds the method-specified criteria.
Q	-The quality control sample exceeds the associated acceptance criteria. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
R	-Analytical results are from sample re-analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised July 19, 2010 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

GLOSSARY

Acronyms

- EPA** - Environmental Protection Agency.
- LCS** - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
- LCSD** - Laboratory Control Sample Duplicate: Refer to LCS.
- MDL** - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- MS** - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
- MSD** - Matrix Spike Sample Duplicate: Refer to MS.
- NA** - Not Applicable.
- NC** - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
- NI** - Not Ignitable.
- RL** - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- RPD** - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.

Report Format: Data Usability Report

Project Name: STOW ST.
Project Number: 0022-23-02

Lab Number: L1013546
Report Date: 09/17/10

Data Qualifiers

RE - Analytical results are from sample re-extraction.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised July 19, 2010 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. **NELAP Accredited Solid Waste/Soil.**

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP), Ethylene Dibromide (EDB), 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223 P/A), E. Coli. – Colilert (SM9223 P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D))

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E).)

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Volatile Organics, Acid Extractables (Phenols), 3,3'-Dichlorobenzidine, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES
A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	NO
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	NO
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	NO
For any questions answered "No", please refer to the case narrative section on the following page(s).		

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: STOW ST.
Project Number: 0022-23-02

Lab Number: L1013666
Report Date: 09/13/10

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

concentrations of target compounds in the samples.

L1013666-15 and -17 have elevated detection limits due to the dilutions required by the matrix interferences encountered during the concentration of the samples and the analytical dilutions required by the elevated concentrations of target compounds in the samples.

L1013666-02, -04, -05, -11, -12, -14, -15, and -17 were re-analyzed on dilution in order to quantitate the samples within the calibration range. The results should be considered estimated, and are qualified with an E flag, for any compound that exceeded the calibration on the initial analysis. The re-analyses were performed only for the compounds that exceeded the calibration range.

In reference to question G:

L1013666-02, -05, -15, and -17: One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The surrogate recovery for L1013666-04 is outside the individual acceptance criteria for 4-Terphenyl-d14 (147%), but within the overall method allowances. The results of the original analysis are reported; however, all associated compounds are considered to have a potential bias.

The WG431692-2/-3 LCS/LCSD RPDs, associated with L1013666-01, -02, -04, -05, -11 through -17, and -23, are above the acceptance criteria for Acenaphthene (46%), Fluoranthene (40%), Naphthalene (48%), Benzo(a)anthracene (44%), Benzo(a)pyrene (44%), Benzo(b)fluoranthene (50%), Benzo(k)fluoranthene (39%), Chrysene (43%), Acenaphthylene (43%), Anthracene (42%), Benzo(ghi)perylene (43%), Fluorene (45%), Phenanthrene (41%), Dibenzo(a,h)anthracene (44%), Indeno(1,2,3-cd)Pyrene (47%), Pyrene (42%), and 2-Methylnaphthalene (49%); however, the individual LCS/LCSD recoveries are within method limits.

In reference to question I:

All samples were analyzed for a subset of MCP compounds per the Chain of Custody.

Metals

LCS/LCSD SRM Lot#: ERA D067-540

L1013666-18 and -20 have elevated detection limits due to the dilutions performed because of suspected high concentrations of non-target analytes.

Case Narrative (continued)

L1013666-21, - 22, and -23 have elevated detection limits due to the dilutions required by the high concentrations of non-target analytes.

In reference to question I:

All samples were analyzed for a subset of MCP elements per the Chain of Custody.

GLOSSARY

Acronyms

- EPA** - Environmental Protection Agency.
- LCS** - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
- LCSD** - Laboratory Control Sample Duplicate: Refer to LCS.
- MDL** - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- MS** - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
- MSD** - Matrix Spike Sample Duplicate: Refer to MS.
- NA** - Not Applicable.
- NC** - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
- NI** - Not Ignitable.
- RL** - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- RPD** - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.

Data Qualifiers

RE - Analytical results are from sample re-extraction.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised July 19, 2010 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. **NELAP Accredited Solid Waste/Soil.**

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP), Ethylene Dibromide (EDB), 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223 P/A), E. Coli. – Colilert (SM9223 P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D))

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status		
A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a.	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b.	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES
A response to questions G, H and I is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	YES
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	YES
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES
For any questions answered "No", please refer to the case narrative section on the following page(s).		

Please note that sample matrix information is located in the Sample Results section of this report.

Project Name: STOW ST.
Project Number: 0022-23-02

Lab Number: L1015207
Report Date: 10/01/10

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEX data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

MCP Related Narratives

Report Submission

All MCP required questions were answered with affirmative responses; therefore, there are no relevant protocol-specific QC and/or performance standard non-conformances to report.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

- EPA** - Environmental Protection Agency.
- LCS** - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
- LCSD** - Laboratory Control Sample Duplicate: Refer to LCS.
- MDL** - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- MS** - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
- MSD** - Matrix Spike Sample Duplicate: Refer to MS.
- NA** - Not Applicable.
- NC** - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
- NI** - Not Ignitable.
- RL** - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
- RPD** - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported due to obvious interference.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.

Data Qualifiers

- RE** - Analytical results are from sample re-extraction.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised July 19, 2010 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.

Dear Bruce:

September 11, 2010

Please find enclosed seven (7) PLM digital photomicrographs, seven (7) SEM digital photomicrographs and seven (7) EDS spectra from the submitted samples for coal/wood ash/coal flyash identification according to the "Methods for Evaluating Application of the Coal Ash and Wood Ash Exemption under the Massachusetts Contingency Plan" by stereomicroscopy, Polarized Light Microscopy (PLM) and Scanning Electron Microscopy/Energy Dispersive X-ray Spectrometry (SEM/EDS).

METHODS:

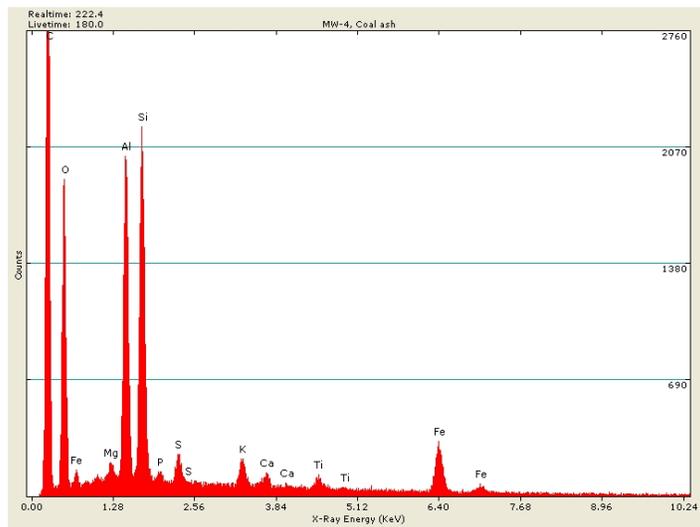

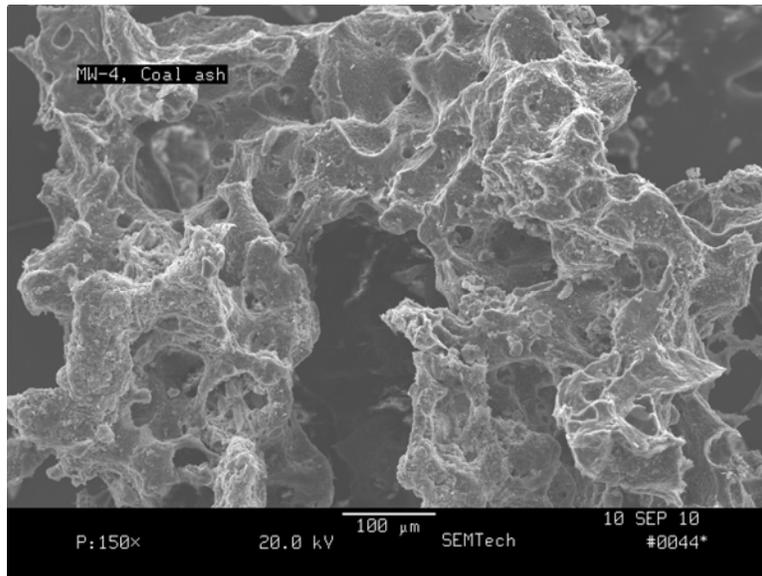

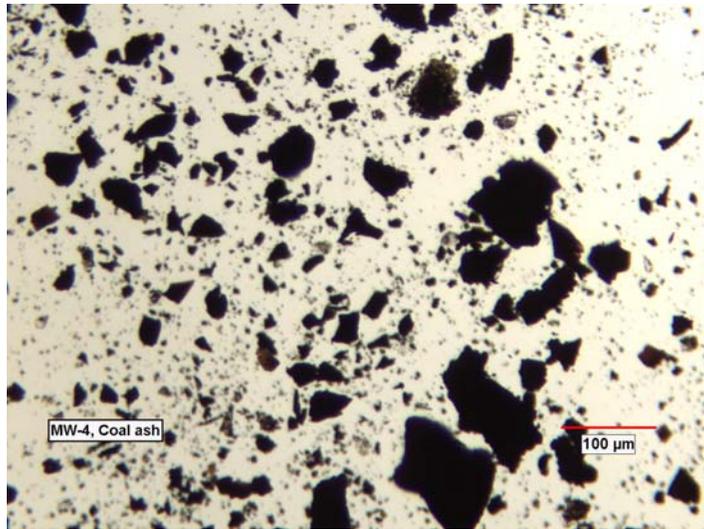

A major portion of the sample was dried in a Blue M Model OV-18SA drying oven at 90 degrees C for 2 hours in two 3-inch aluminum weighing dishes to remove any moisture. Numerous black grains, similar in appearance to coal, wood ash or coal flyash were removed and separated with tweezers under the examination of a Nikon stereomicroscope. A portion of the grains were mounted on double-sided tape on a ½ inch SEM stub. Another portion of the grains were ground into a fine powder with a mortar and pestle, then an aliquot was deposited in index of refraction liquid (n=1.605 Cargille Series E High Dispersion) on a glass slide for the PLM examination.

The SEM stubs were coated with graphite from an Edwards Vacuum Evaporator to eliminate charging in nonconductive samples. The samples were examined in an Amray 3300 FESEM (field emission scanning electron microscope) with energy dispersive x-ray spectroscopy (EDS) using a light element detector to determine the elemental composition of the samples. Digital photomicrographs were taken of the particles both by PLM and SEM/EDS in order to document the observations in this report.

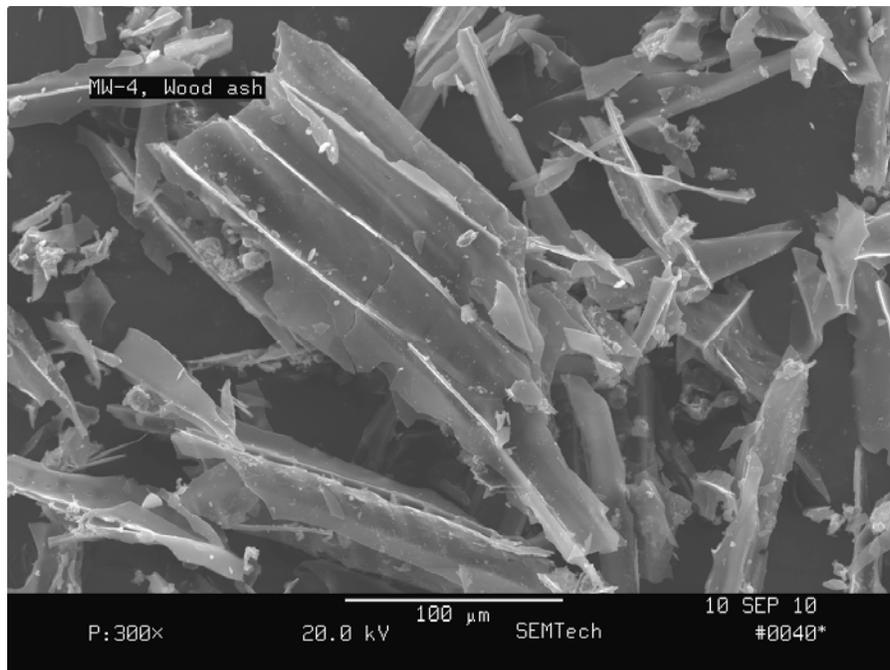

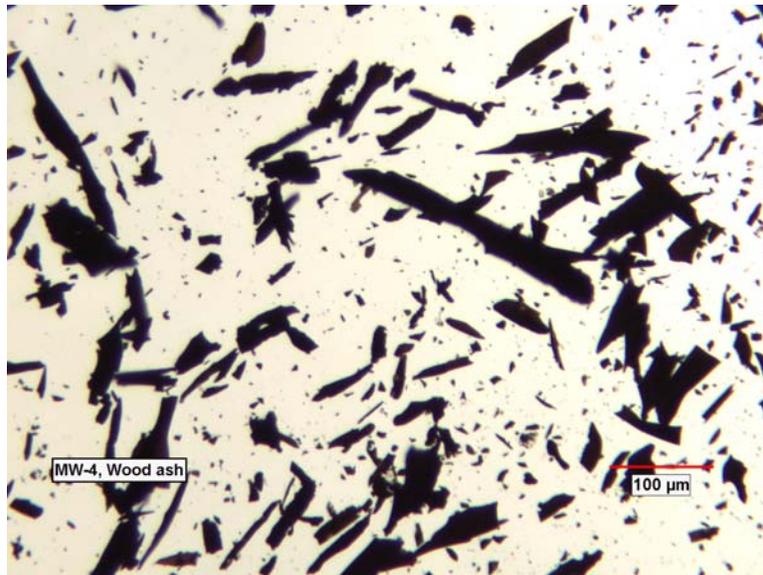

FINDINGS: MW-4, 0'-2':

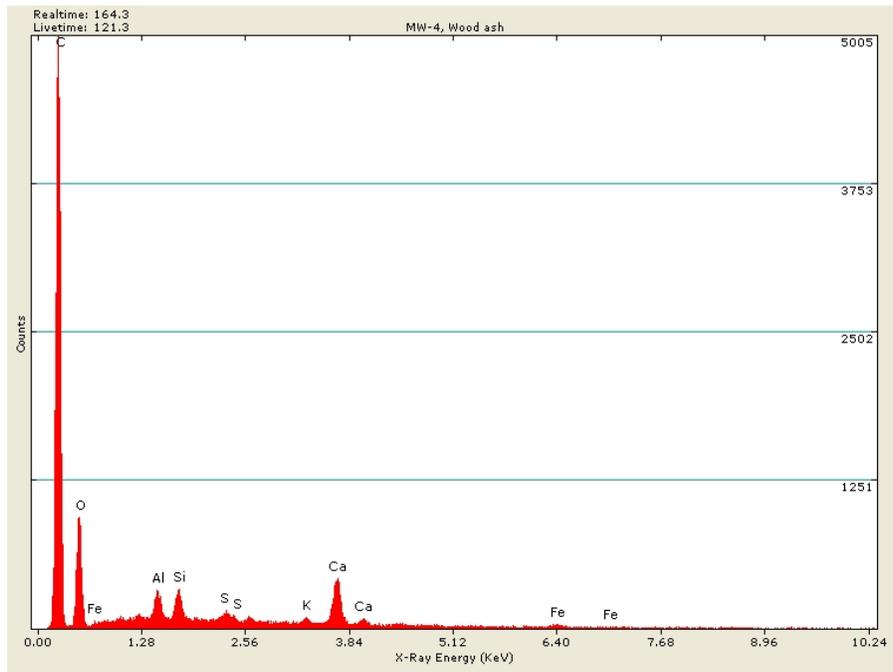

Please refer to the PLM and SEM photomicrographs as well as the EDS spectra. Five particle types were identified in this sample for the coal ash analysis.

The first particle type consists of irregular curved gray-black opaque particles that did not dissolve in the index of refraction oil by PLM. SEM examination reveals the presence of pits, craters and puck marks on the exterior surface of the particles. The EDS spectrum exhibits a strong carbon peak, moderate concentrations of oxygen, aluminum and silicon, with lower amounts of magnesium, phosphorus, sulfur, potassium, calcium, titanium and iron. These characteristics and chemical ratios match coal ash. The high carbon content suggests that this coal ash was incompletely combusted at low temperatures.

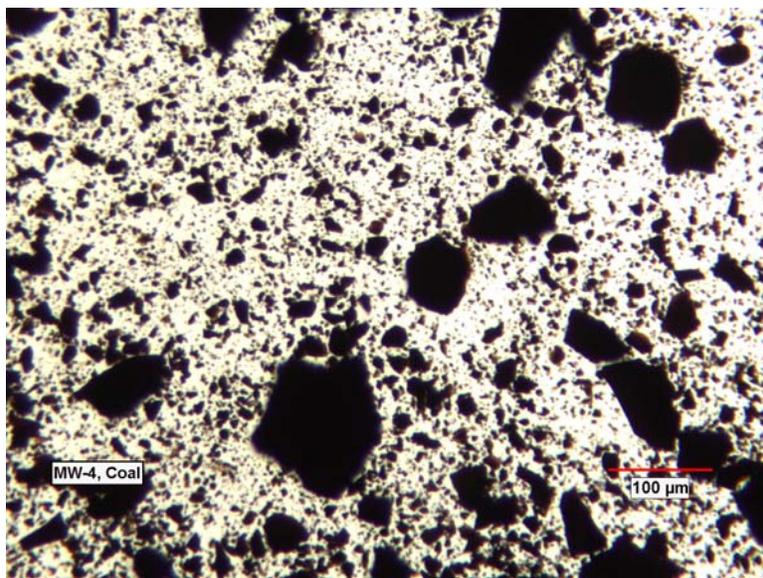

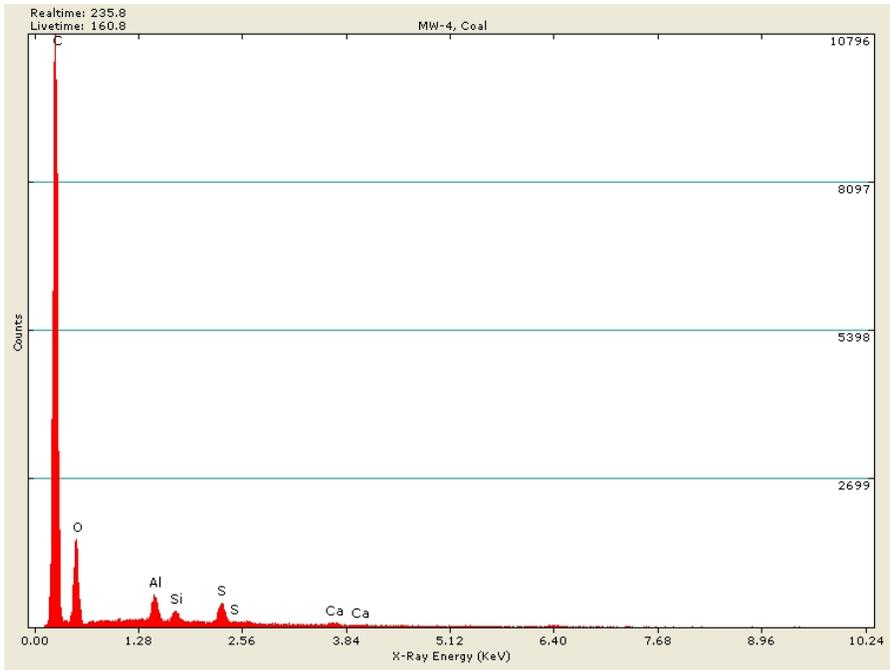

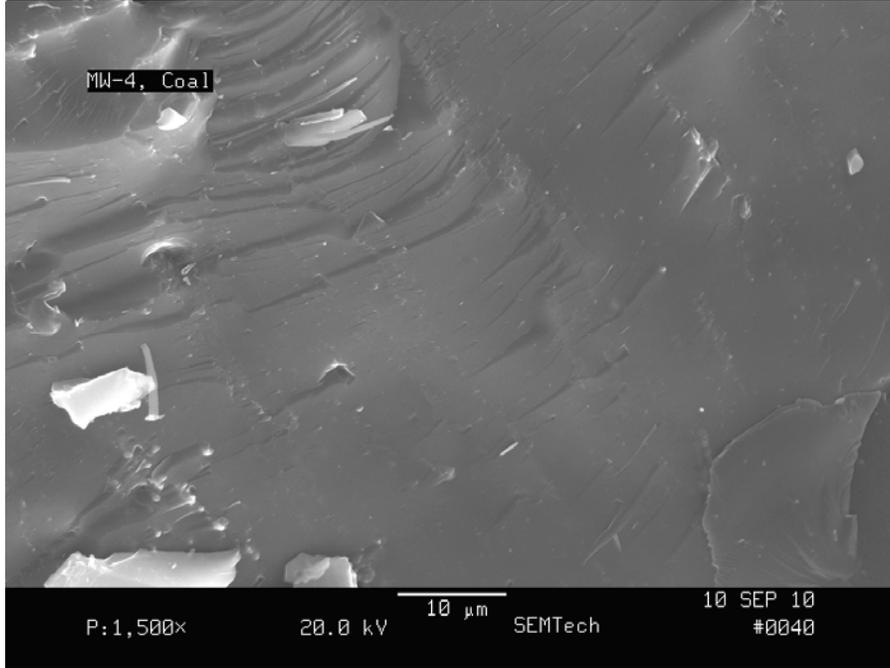

The second particle type exhibits irregularly shaped opaque fibers that did not dissolve in the aromatic oil. By SEM, these fibrous particles frequently show vessels and circular indents or chambers, indicating the cellular structure of the wood. The elemental composition of wood ash may be diverse, and usually depends upon what elements may have diffused into the wood from the surrounding environment. These wood ash fibers showed a very strong carbon peak, a low amount of oxygen, with minor concentrations of aluminum, silicon, sulfur, potassium, calcium and iron. The presence of calcium was due to the presence of calcium carbonate which was derived from the decomposition of calcium oxalate crystals in the bark. These characteristics and elemental ratios match wood ash.

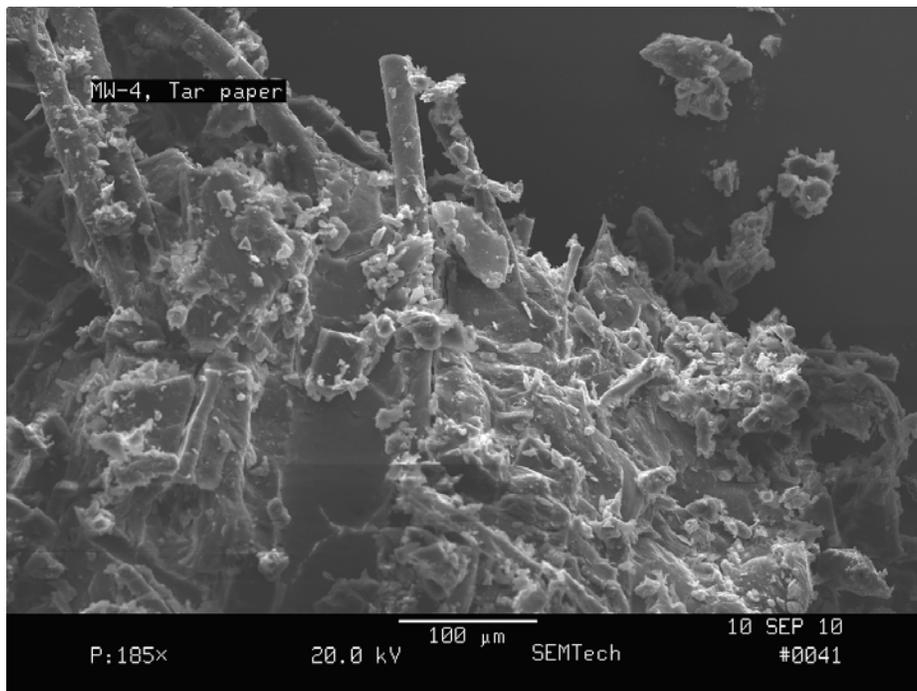

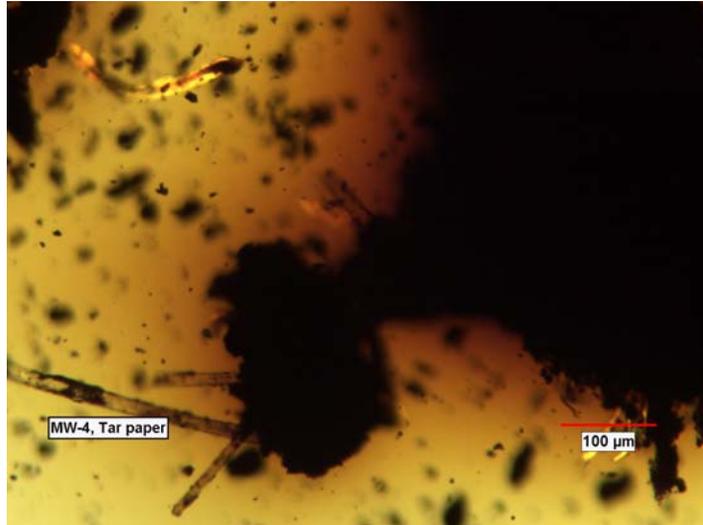

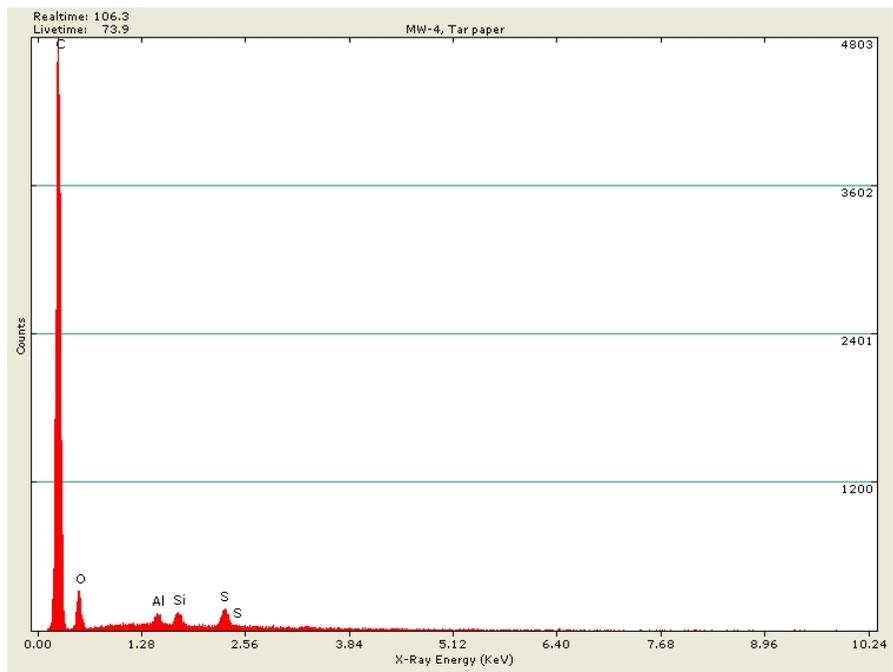

The third particle type appears as amber-brown irregular shaped opaque particles by PLM. The texture was soft when ground in the mortar and pestle. The grains do not dissolve in the index of refraction oil. SEM examination reveals smooth, sharp and curved surfaces which show parallel conchoidal fracture lines. The EDX spectrum demonstrates a very strong carbon peak, a lower amount of oxygen, with minor amounts of aluminum, silicon, sulfur and calcium. These characteristics and elemental ratios match bituminous coal.

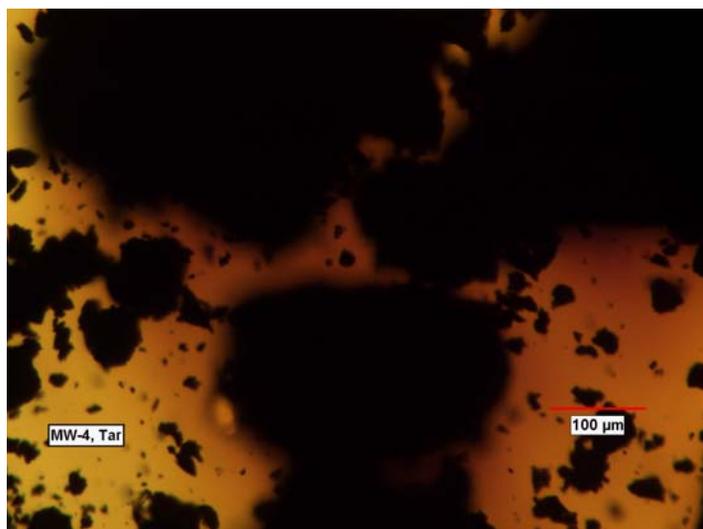

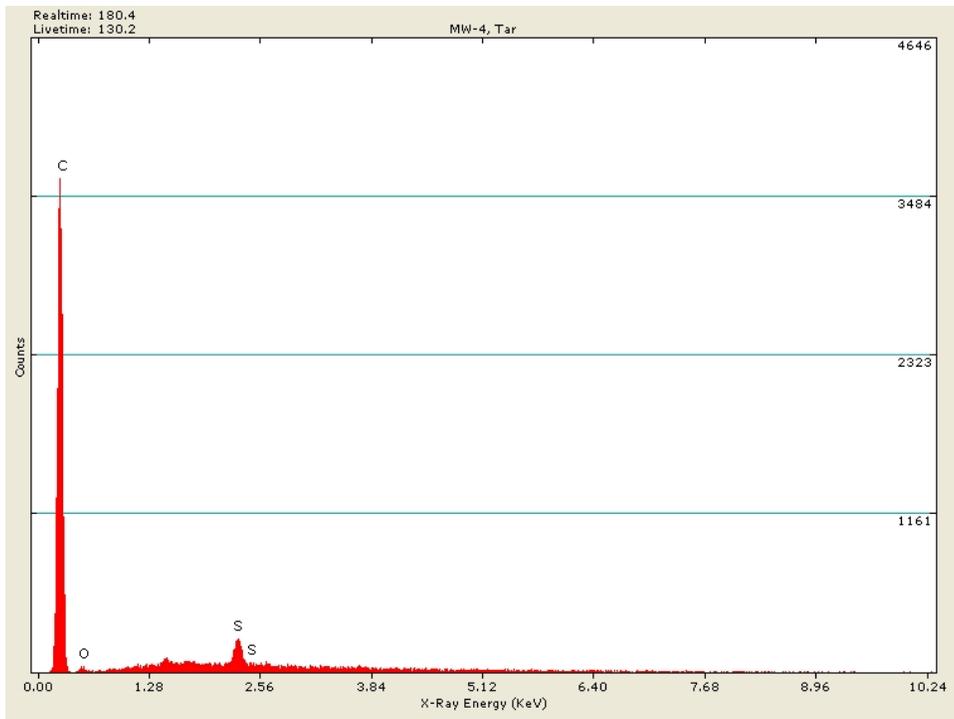

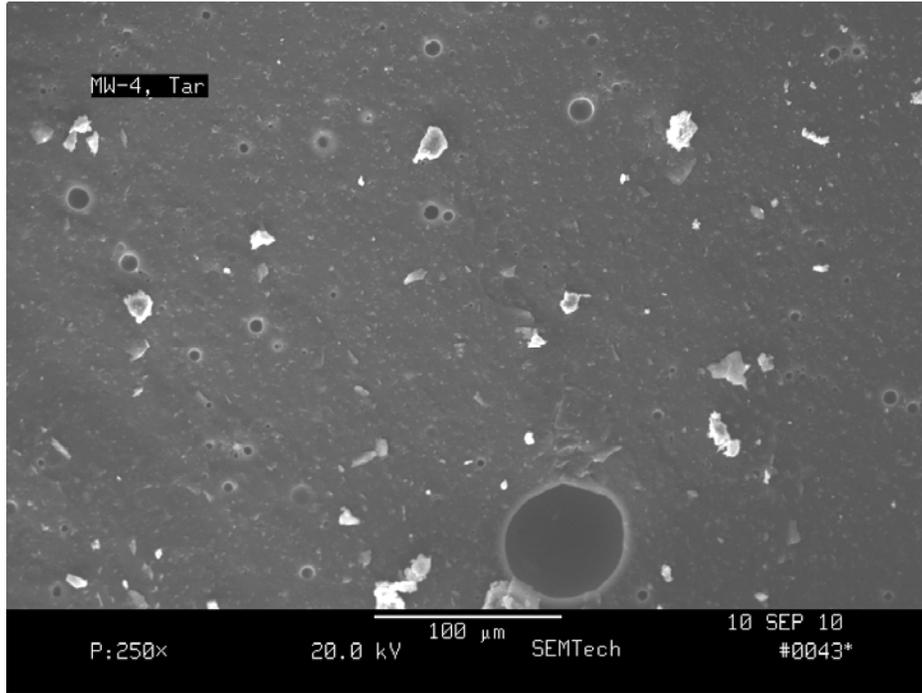

The fourth particle type consisted of tar-like paper. When snapped in half, some fine fibrous strands were emanating from each half. The matrix immediately started to dissolve to an orange/brown color in the index of refraction liquid under the PLM with cellulose-like fibers embedded in the matrix. The SEM examination also showed fibers embedded in the particle mass. The EDX spectrum consisted of a very strong carbon peak, with lower concentrations of oxygen, aluminum, silicon and sulfur. These characteristics and elemental ratios match a tar paper/felt material.

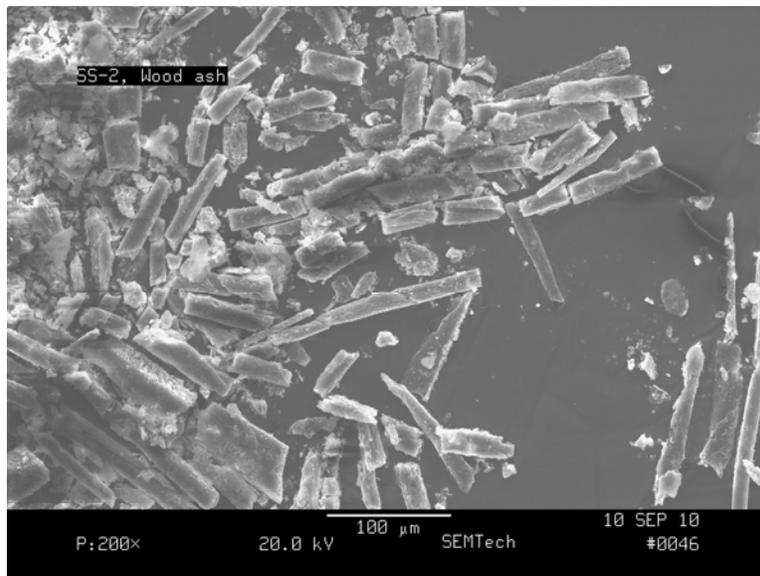

The fifth particle type demonstrated irregular opaque particles without any embedded internal particles which immediately started to dissolve to an orange/brown color in the index of refraction liquid under the PLM. The SEM examination of a cross-section of a circular globule showed a relatively smooth surface with numerous puck marks from the release of gas under pressure. The EDX spectrum consisted of a very strong carbon peak, with a low level of sulfur, and trace of oxygen. These characteristics and elemental ratios match tar, especially coal tar.

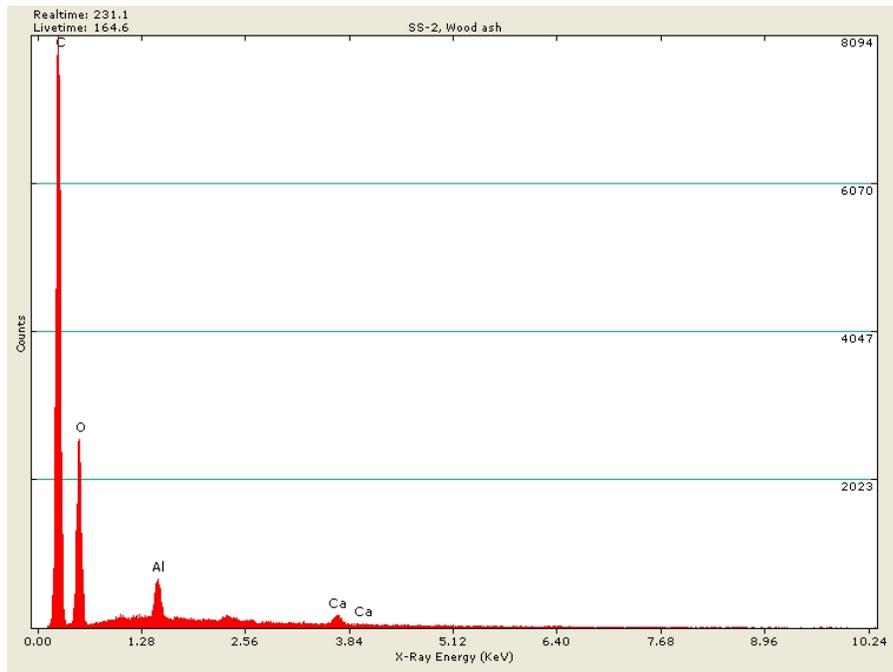

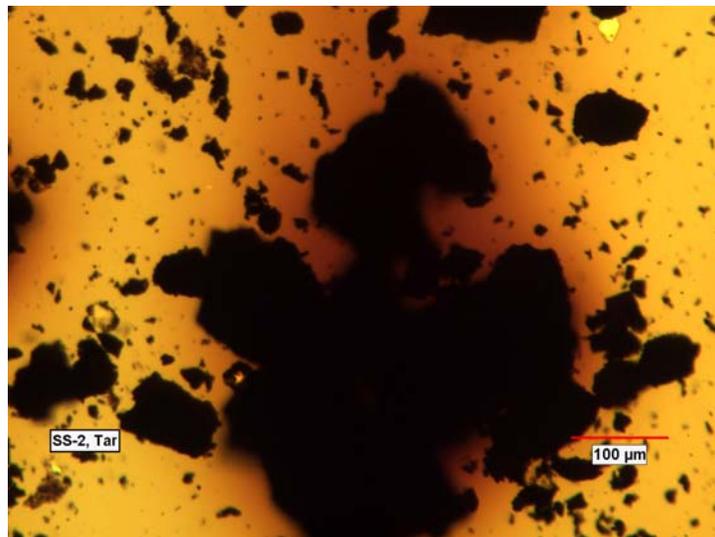

SS-2, 0'-2':

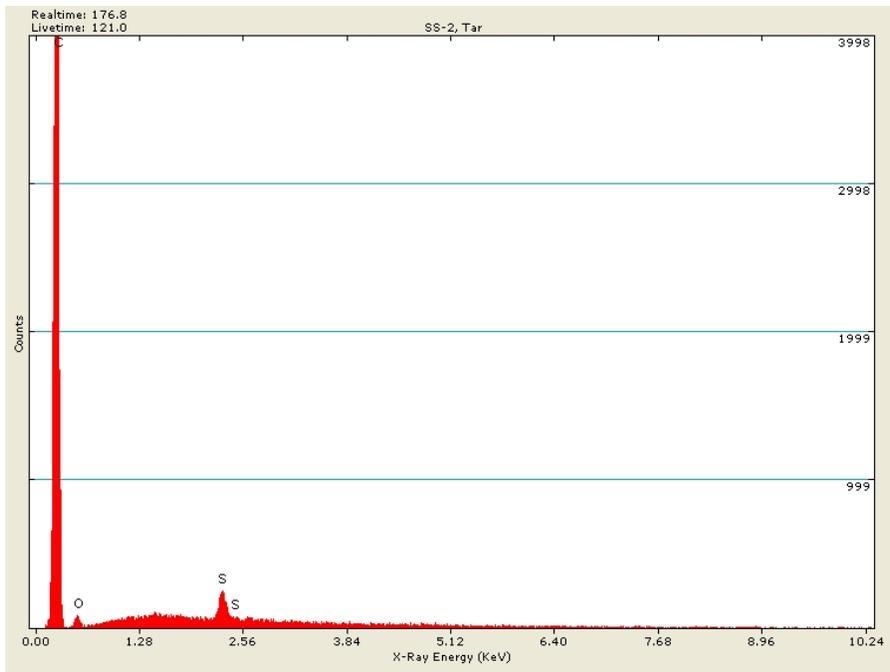

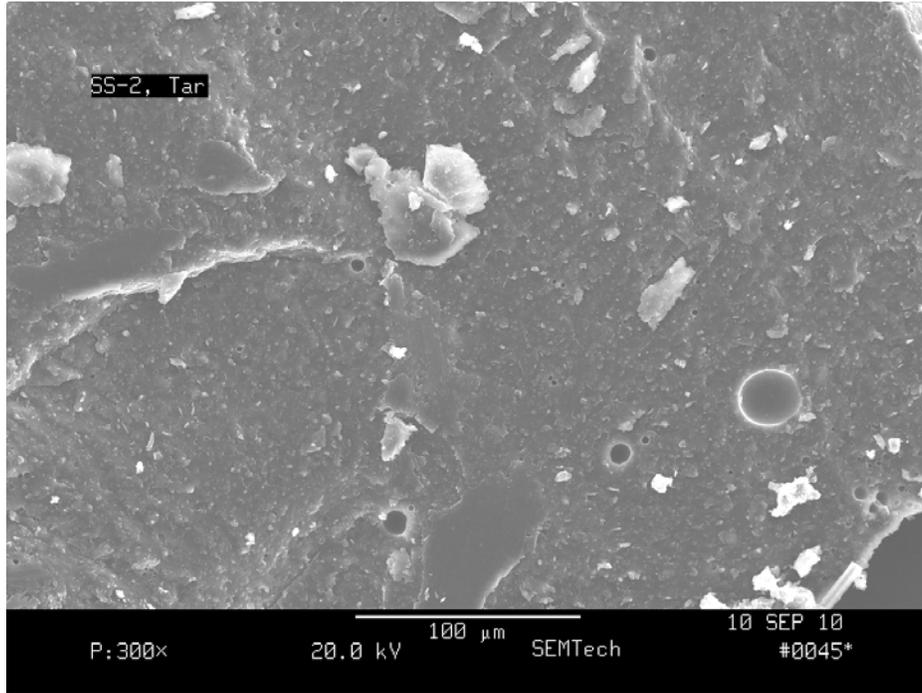

Two particle types were identified in this sample for the coal ash analysis. The first particle type exhibits irregularly shaped opaque fibers that did not dissolve in the aromatic oil. By SEM, these fibrous particles frequently show vessels and circular indents or chambers, indicating the cellular structure of the wood. These wood ash fibers showed a very strong carbon peak, a moderate amount of oxygen, with minor concentrations of aluminum and calcium. The presence of calcium was due to the presence of calcium carbonate which was derived from the decomposition of calcium oxalate crystals in the bark. These characteristics and elemental ratios match wood ash.

The second particle type demonstrated irregular opaque particles without any embedded internal particles which immediately started to dissolve to an orange/brown color in the index of refraction liquid under the PLM. The SEM examination of a cross-section of a circular globule showed a relatively smooth surface with numerous puck marks from the release of gas under pressure. The EDX spectrum consisted of a very strong carbon peak, with a low level of sulfur, and trace of oxygen. These characteristics and elemental ratios match tar, especially coal tar.

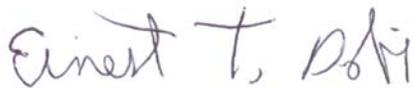

DISCUSSION:

The EDS data, texture and morphology of the grains as seen by the PLM and SEM were consistent for a heavy concentration of coal ash, a trace amount of wood ash, a light to moderate concentration of bituminous coal, a light concentration of tar paper, and a heavy concentration of tar globules which were characteristic of coal tar in sample MW-4.

Sample SS-2 contained a trace of wood ash and a trace of tar, which was characteristic of coal tar.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

For method 6010, only arsenic and lead results were requested and reported.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

A handwritten signature in black ink, appearing to read "M. Erickson", is written on a light gray rectangular background.

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 10J0167

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Acton, MA

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

For method 6010, only TCLP arsenic and lead were requested and reported.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.
