Narrative

The applicant is proposing to construct a single family dwelling, deck, garage, drywell, rain garden, associated grading and utilities within the 100 ft. Buffer Zone of a Bordering Vegetated Wetland. Erosion controls will be set and maintained throughout the project.

Site Description

The site consists of approximately 2.17 acres of land with an existing single family home and driveway located on the property. The applicant is proposing to subdivide the lot into (3) building lots. The majority of the lot is cleared of vegetation and is maintained as lawn area except along the easterly property line.

A Bordering Vegetated Wetland and associated intermittent stream is located along the easterly property line. The wetland is a red maple swamp wetland and is shown on the plans as 1A-14A. The red maple swamp consists of red maple (*Acer rubrum*) and black cherry (*Prunus serotina*) in the overstory. The understory consists of multiflora rose (*Rosa multiflora*), glossy buckthorn (*Rhamnus frangula*), and tartarian honeysuckle (*Lonicera tatarica*). The herbaceous layer consists of Jewelweed (*Impatiens capensis*) and kentucky bluegrass (*Poa pratensis*).

Soils

The Middlesex County Soil Survey maps this site as Deerfield and Hinckley series. Deerfield series consists of nearly level gently sloping, deep (5+ ft.), moderately well drained soils on glacial outwash plains, terraces and deltas. They formed in sands. Deerfield soils have a loamy fine sand to sand surface soil and subsoil with a rapid permeability, over a loamy sand to coarse sand substrata with very rapid permeability. They have a seasonal high water table at 18 to 36 inches. Major limitations are related to wetness.

Hinckley series consists of nearly level to very steep, deep (5+ ft.), excessively drained soils on glacial outwash plain, terraces, kames, and eskers. They formed in gravelly and cobbly coarse textured glacial outwash. Hinckley soils have friable or loose, gravelly and

very gravelly sandy loam to loamy coarse sand surface soil and subsoil with rapid permeability, with loose stratified sands and gravels in the substratum at 12 to 30 inches which have a very rapid permeability. Major limitations are related to slope and droughtiness.

Proposed Work

The applicant is proposing to construct a single family dwelling, deck, garage, drywell, rain garden, associated grading and utilities. Erosion controls will be set and maintained throughout the project.

Town of Acton Wetlands Protection By-Law, Chapter F

The Acton Wetlands Protection Bylaw, Chapter F Section F8.3 Setback for Activities states, “The following are the minimum distances (setbacks) of activity from the edge of wetlands or vernal pools. No activity shall be allowed within these setbacks except as provided below. These setbacks are the minimum and may be extended further if deemed necessary for the protection of the interests of the Bylaw by the Commission; (2) 50-foot buffer of undisturbed natural vegetation; (3) 75-foot setback to the edge of driveways, roadways, and structures.”

The applicant meets these requirements as a 50-foot buffer of undisturbed natural vegetation is provided and the structures are proposed greater than 75 feet from the wetland.

MAP INFORMATION

Map Scale: 1:1,600 if printed on A size (8.5" × 11") sheet.

The soil surveys that comprise your AOI were mapped at 1:25,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for accurate map measurements.
