

## **Good Work Practice – Site Specific Health and Safety Plans (HASP), Personal Protective Equipment (PPE)**

Each work site has a minimum PPE requirement. Additional equipment may be specified for certain work assignments, or work areas. The required personal protective equipment shall be used. Geocomp/GeoTesting will make every effort to eliminate all hazards in your work place. After an assessment of the hazard is completed and it is determined that particular hazards cannot be eliminated or controlled by engineering means, and we still need to perform work in the area, PPE will specified and issued to each person working in the area.

The Site Specific Health and Safety Plan will determine the required PPE needed for the task and the Site Safety Officer is responsible for ensuring that each person under their charge wears the required PPE. The following Level D PPE applies for most sites:

1. Geocomp/GeoTesting hard hat w/ appropriate logo
2. Safety glasses with side shields
3. Hi-visibility Vests or highly visible shirts
4. Shirt with sleeves (no tank tops or sleeveless shirts)
5. Substantial Work Boots (NO tennis shoes or sandals), steel toed boots as necessary
6. Gloves when handling rough or sharp materials.
