REVIEW SECTION: PROJECTS				REVIEWER NAME: THOUNG PHAN		
1.		The traffic management plan (TMP) should have been included. Although not a mandatory part of a 25% design, the TMP is a critical component of this type of project since it often establishes the parameters of the construction staging.		We anticipate standard lane closures for the majority of the construction. In the more urbanized areas of downtown Maynard, interruptions to pedestrian access to the local business will be coordinated and presented in the 75% plans. We propose to discuss further at the comment resolution meeting.		
2.		The designer needs to show all existing traffic operations-related signs in the project area and indicate what their disposition is (i.e. R&S, R&R).		We will show existing traffic signs and add disposition labels in the 75% submittal.		
3.		Provide a separate Sign & Pavement Marking Plan and a Construction Sign Summary sheet.		We will provide and incorporate into 75% submittal.
