Important Information About This Coverage Map

This coverage viewer provides a high-level approximation of wireless coverage. There are gaps in coverage that are not shown by this high-level approximation. Actual coverage may differ from map graphics and may be affected by terrain, weather, foliage, buildings and other construction, signal strength, high-usage periods, customer equipment, and other

factors. AT&T does not guarantee coverage. Our coverage maps are not intended to show actual customer performance on the network, nor are they intended to show future network needs or build requirements inside or outside of existing AT&T coverage areas. Coverage maps also may include areas served by unaffiliated carriers and may depict licensed areas rather than an approximation of coverage. Charges will be based on the location of the site receiving and transmitting the call, not the subscriber's location. Your phone's display does not indicate the rate you will be charged.

These maps are subject to the Microsoft® Service Agreement and for informational purposes only. No guarantee is made regarding their completeness or accuracy. Construction projects, traffic, or other events may cause actual conditions to differ from these results. Map and traffic data 2013 NAVTEQ®

Coverage Legend Definitions

4G LTE* (Long Term Evolution): The areas shown in dark orange represent AT&T's fastest mobile Internet speeds. You'll know you're in our LTE coverage area when the 4G LTE network indicator displays next to the signal bars on your device. Compatible device required. Certain 4G LTE devices are not compatible in select LTE network coverage areas. [Learn more.](#)

4G* (Mobile Broadband): The areas shown in medium orange represent AT&T's 4G High Speed Packet Access (HSPA+) network with enhanced backhaul. Compatible device required.

3G* (3G Voice and 3G Mobile Broadband Data): This coverage, shown in light orange, is available in most metropolitan areas. Like all coverage, it can and will be adversely affected by distance from cell site, weather, foliage, tower congestion, and other factors. You'll know you're in our 3G coverage area when the 3G network indicator displays next to the signal bars on your phone. Compatible device required.

Partner 3G: These areas, shown in light orange with a striped pattern, represent unaffiliated partner network coverage. This coverage supports nationwide text and email service and basic WAP (Wireless Application Protocol) Internet browsing. Excessive use of partner service may result in the loss of coverage in partner areas as stated in your service terms. Compatible device required.

2G*: The areas shown in tan depict AT&T's 2G network coverage. Advanced mobile services like video and music clips, full picture & video messaging, high-speed color Internet access, and email on the move are possible. Compatible device required.

Partner 2G: These areas, shown in tan with a striped pattern, represent an unaffiliated partner network that provides 2G mobile services. These include advanced mobile services like video and music clips, full picture & video messaging, high-speed color Internet access, text, email, and basic WAP browsing. Excessive use of partner service may result in the loss of coverage in partner areas as stated in your plan terms. Compatible device required.

* Supports AT&T DataConnect Pass: DataConnect Pass coverage is available throughout the AT&T company owned 4G, 3G, and 2G networks. It can only be used on the AT&T wireless network and cannot be used on another carrier's network, either domestic or international. Requires laptop or netbook with aircard/connect card capable of working on the AT&T wireless network; Internet access to sign up; and a new SIM card. AT&T DataConnect Pass supports data usage only, and does not support SMS, MMS, or voice calls. Actual speed and coverage may vary. Time begins expiring immediately upon purchase, whether or not you are using the service. Once your time expires or the allotted megabytes are used, whichever occurs first, your data access will cease. AT&T may send alerts via SMS or email to notify you of usage and/or time remaining. These are courtesy alerts. There is no guarantee you will receive such alerts.

Coverage Legend Definitions

Best: Signals are strongest in areas shown in dark orange and should be sufficient for most in-building coverage. However, in-building coverage can be adversely affected by the thickness and/or construction type of walls or your location in the building (for example, in the basement in the middle of a building with multiple walls). This AT&T-owned wireless network provides 3G and 2G service.

Good: The areas shown in medium orange should support on-street or in-the-open coverage, most in-vehicle coverage and some in-building coverage. This AT&T-owned wireless network provides 3G and 2G service.

Moderate: The signal should be strong enough to support on-street or in-the-open coverage in areas shown in light orange. However, signals may not be strong enough for in-vehicle or in-building coverage. This AT&T-owned wireless network provides 3G and 2G service.

Partner: The areas shown in tan depict coverage provided by unaffiliated carriers. In these areas, the signal should be strong enough for on-street or in-the-open coverage, but may not be sufficient for in-vehicle or in-building coverage.

Requires 3G Handset: To access coverage in the areas shown in a striped pattern, you'll need a 3G-capable device and eligible rate plan. Like all coverage, it can be adversely affected by distance from cell site, weather, foliage, tower congestion, and other factors. You'll know you're in an AT&T 3G coverage area when the 3G network indicator displays beside the signal bars on your phone.
